Hand Towels

Premoistened Tub-O Towels remove grease, dirt, adhesives and other tough soils, and are now available in a 40-count canister. These towels feature a fast-acting, citrus-based chemistry fortified with glycerin, jojoba, vitamin E and aloe vera skin protectors. The nontoxic wipes are gentle on hands and are said to reduce hand-washing time. *Federal Process*

Wiper Blades

Contour wiper blades feature a one-piece design and utilize an advanced internal flexor and unique aerodynamic spoiler to evenly distribute pressure across the full blade surface. A natural rubber formulation allows the blades to deliver premium performance in virtually any weather condition, according to the manufacturer.

The blades are available as an all-season performance upgrade for ve-

hicles currently equipped with conventional wiper blades, as well as direct replacements on applications utilizing profile-type blades. The company's KwikConnect system simplifies installation. *ANCO*

Air-Cooled Torches

With five models to choose from, the WP-26 series of hand-held air-cooled

torches offers combinations of features to suit a wide variety of TIG welding applications. All WP-26 torches are rated to 200 amps DC or 150 amps AC at 60% duty cycle. All accept tungsten electrodes from .020 to 1/8 in. (.5 to 4.0mm) and are manufactured with heavy-duty copper materials to provide maximum conductivity and durability under demanding conditions. An optional gas control valve on the handle allows welders to easily tune in the ideal gas flow for superior control and comfort. An optional flexible neck adjusts to any angle, making it ideal for awkward positioning and hard-to-access joints. A pencil-style torch is also available for very confined joints, or for automated applications. Available accessories include cable covers, conversion kits and power cable adapters. *Weldcraft*

New Belt Design

The Micro-V AT belt is designed with new internal compounds, a gumback construction that decreases back-side

wear and an improved full-rib profile that greatly reduces belt cracking.

These features minimize belt slip and the effects of drive misalignment, the two major causes of belt noise. By reducing belt cracking, this new belt design provides

optimum OE-quality performance in high- and low-temperature extremes and high-humidity conditions, says the manufacturer. The company expects to provide aftermarket customers with more than 700 product numbers for domestic and import applications. *Gates*

Quick Leak Repair

Spray'N'Seal Leak Repair is designed to seal low-pressure leaks in minutes

without the need for disassembling or removing parts. The product applies as an aerosol and is easy to use in hard-to-reach places. A wicking action forms a durable rubber barrier from the outside of the part or assembly. Applications include hoses, oil pans, differentials, transmission pans, thermostat housings,

water pumps, valve covers, tubing connections, electrical harness connectors, plastics, PVC and canvas. The product can fill gaps as large as .040 in. and can be used from -65° to 350°F (-54° to 177°C) continuous and up to 400°F (204°C) intermittent. It applies as a clear coating, dries tack-free in five minutes, fully cures in 30 to 45 minutes and is highly resistant to common shop fluids. The product comes in a 9-oz. aerosol can and includes an extra spray nozzle and straw extension. *Permatex*
